

ThumbDriver®

Restores opposition and strength.

The **ThumbDriver** is a body-driven prosthesis designed for finger and partial-hand limb difference at the proximal phalanx of the thumb.

The addition of a **ThumbDriver** can restore 2- and 3-point pinch, allow for secure medium and large diameter grasp patterns, and can increase fine motor/dexterity function.

IDEAL ANATOMICAL PRESENTATIONS FOR FIT:

This device is driven by an intact MCP joint and tracks the motions of the CMC joint. Suspension is maintained with enough residuum to engage the ring. For a person with finger and partial-hand limb difference who doesn't meet the typical requirements for the **ThumbDriver**, it is still possible to obtain functional benefit from an added device. Our engineers design to fit your patient, resulting in a functional device.

UNIQUE FEATURE + FUNCTION:

This design includes an adjustable pre-flexion option made for on-demand adaptation by the device wearer to fit the needs of the task at hand. This makes many functional pinch and grasp patterns easier to achieve.

The conductive tip option is available for touchscreen use.

**Please note that due to the manufacturing process, variations in the color, shade, and tone of nylon components and anodized fasteners may occur.*
